 School Principals  
 Classroom Teachers  
 Special Education  
 Professional Development Managers  
 Students & Parents

**Plus:**

**Federal Agencies**  
**Private Foundations**  
**Professional Analysts & Researchers**

## THE SPECIALIZED DECISION SUPPORT PLATFORM FOR PROFESSIONAL EXPLORATORY RESEARCH & ANALYSIS

### What is EXPLORE?

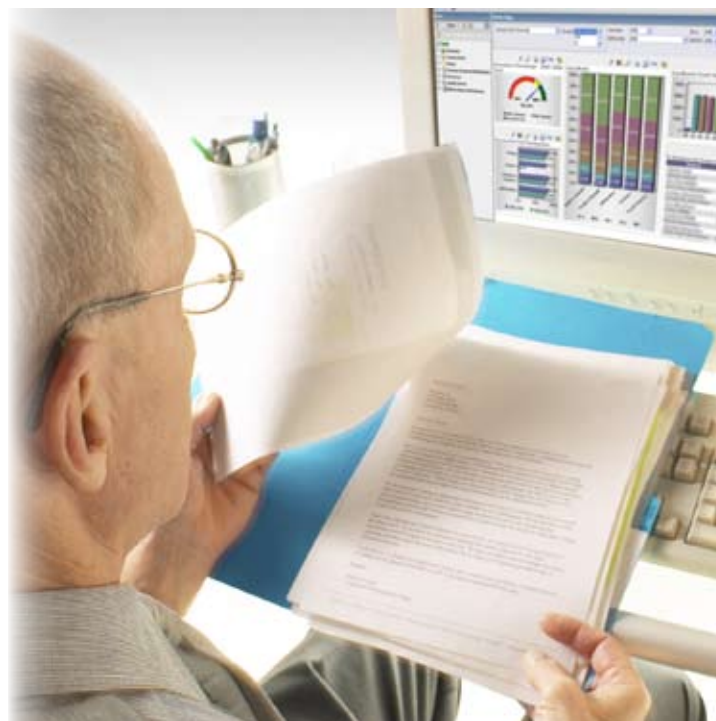

EXPLORE is the **Edvantage™** module which provides the most comprehensive and detailed data structure in a highly customized environment to facilitate efficient enterprise reporting and unlimited custom query capability. EXPLORE extends the data foundations of CORE, EXPAND, and ADVANCE so technical users can employ data mining and other high end analytical techniques for exploratory research purposes. All data is refreshed nightly through prescheduled automated build processes. Data elements support NCLB and State reporting requirements.

### Who uses EXPLORE?

EXPLORE is useful for professional educational researchers, grant managers, consultants, policy makers, strategic planners and others who need to rely on technical reports and analysis when conducting exploratory educational research. Self-service information retrieval, drill-down analysis, comparative metrics, custom reports, and sophisticated statistical analysis for technical users is primarily accomplished through ad-hoc query and other custom data extractions. EXPLORE is also used for technical reporting and analysis activities such as longitudinal analysis and cohort tracking.

## Edvantage™ EXPLORE

Analytic & Reporting Platform

## How does EXPLORE help with educational research and analysis?

EXPLORE helps uncover achievement gaps in literacy for specific groups of students, track longitudinal performance trends of specific groups of students in skill areas such as reading, writing, and mathematics, validate the importance of smaller learning community structures to improve student attendance, and bring to light other important issues through professional research and analysis. EXPLORE is used, as an example, to verify how student course grades are comparing to results on state assessments and other standardized measures, and to determine if grading patterns are reflecting consistency in grading criteria across learning communities and course offerings.

## Why Edvantage™?

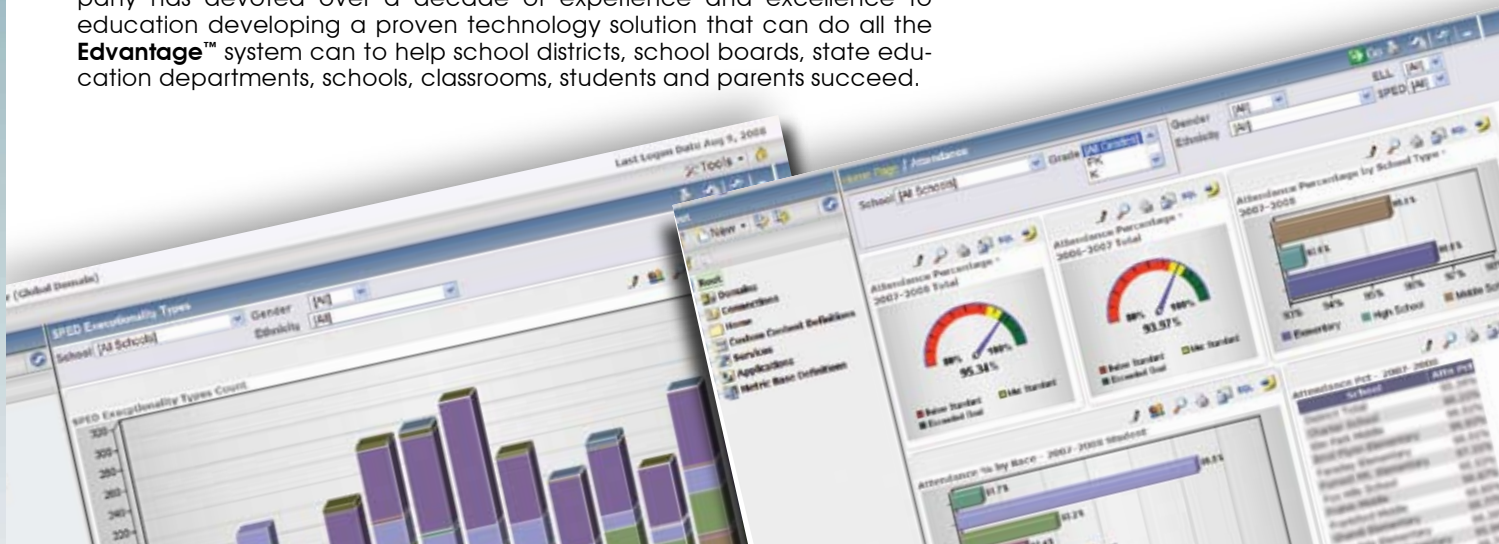

**Edvantage™**, and the **Edvantage™** modules; **CORE**, **EXPAND**, **ADVANCE** and **EXPLORE**, represent the national standard in proven software for informed decision making in public education and has been implemented by many of the largest school districts in the country. The **Edvantage™** technology includes data warehousing, business intelligence, dashboards, data mining and analytical applications. Each **Edvantage™** module provides further possibilities, as more analytical tools are applied to more data for more in-depth decision making.

## Other Edvantage™ enhancement modules.

To further increase the power of your EXPLORE module, ask about these **Edvantage™** enhancement modules now available:

- ACCOUNT –** For high-impact financial analysis and reporting.
- REPORT –** Our high-performance enterprise reporting engine.
- MENTOR –** Our highly-regarded series of end-user analysis training, and professional development programs.
- ASSURE –** Automated data quality monitoring.

**Edvantage™** is a product developed by VERSI-FIT Software, LLC, a company recognized by the education community as the unparalleled leader in understanding and addressing the requirements of K through 20. While other software developers and systems integrators are beginning to pay attention to the needs of today's public education system, deploying experimental, partial and potentially flawed imitations, there truly is no substitute for the **Edvantage™** system. VERSI-FIT leads the education market in offering the most features for the least investment cost. But more important, our 100% success rate confirms that no other company has devoted over a decade of experience and excellence to education developing a proven technology solution that can do all the **Edvantage™** system can to help school districts, school boards, state education departments, schools, classrooms, students and parents succeed.
